

We're hiring!

We are looking for a **DevOps Engineer (m/f/d)** with experience in building, configuring and deploying microservices architecture in docker and docker-swarm using CI/CD techniques.

 Full time

 Hybrid

 Porto, Portugal

Send your CV to: people.tech@augentic.com

Who we are

Augentic Tech is a Portuguese company, inside the Augentic group, focused on developing technical products and implementing them in international projects that serve governments and society in general.

ABOUT THE OPPORTUNITY

In this role, you will work with software development teams building the right infrastructure and deployment automation by using the best practices to ensure scalability, resilience, fault tolerance, and modularity to achieve business requirements.

RESPONSIBILITIES

- Build and Design the best-in-class infrastructure solution to our clients;
- Support delivery team activities by providing the fastest, more reliable, and frictionless deploys;
- Automate until the task is performed with one click;
- Improve our infrastructure on a continuous basis for the ease of software deployment, scalability, reliability, security, and fault tolerance;
- Collaborate on improving technical and user support documentation;
- Provide technical coaching to junior team members;
- Contribute continuously to improve development processes, teamwork routines and dependencies with other areas;

WHAT WE ARE LOOKING FOR

- Graduate degree in computer science, security or network;
 - More than 3 years of experience on a similar role;
 - Experience with continuous integration and deployment tools and processes;
 - Experience with Docker and Docker-Swarm (Kubernetes, Ansible is a plus);
 - Knowledge of data structures and algorithms;
 - Experience with infrastructure automation with tools, e.g. Terraform, Cloudformation;
 - Experience with observability and monitoring tools, like Prometheus and Grafana;
 - Experience installing and configuring SQL databases, one of the PostgreSQL, Oracle, and SQLServer;
 - Experience installing and configuring NoSQL databases like MongoDB and/or ElasticSearch;
 - Experience installing and configuring NGINX as a webserver and gateway;
 - Scripting skills (Python, Perl, Bash, Powershell or others);
-
- DevOps mindset;
 - Relentless willing to learn;
 - Proactive with good organization skills;
 - Ability to adapt to a dynamic and multicultural environment;
 - Excellent written and verbal communication skills in Portuguese and English;
 - Team player and committed to company success;

WHAT WE OFFER

- Competitive salary based on experience;
- Hybrid work model with flexibility tailored to team dynamics and good work-life balance;
- Integration in a young, dynamic, and multicultural environment;
- Participation in international projects providing products and solutions that truly impact people's lives, aiming at identification, security, social integration, and citizen mobility;
- Opportunity for growth in a multinational company;

AVAILABILITY

- Full-time position;
